

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A method comprising:
receiving one or more inputs, the one or more inputs requesting recording of one or more of a plurality of jobs;
determining one or more solutions for each of the plurality of jobs based on a transmission schedule, each non-null solution requiring a set of resources over a set of intervals, wherein one or more combinations of solutions for the plurality of jobs require a number of resources greater than a number of resources available at a particular interval, resulting in a scheduling conflict;
resolving the scheduling conflict including automatically determining one or more plans for performing jobs, each plan having a combination of solutions including a particular solution for each of the plurality of jobs, wherein resources used by the plurality of jobs for the combination of solutions in each plan are less than or equal to the number of resources available at each interval; ~~and~~
scoring each of the one or more plans; and
using a specified plan of the one or more plans to determine a recording schedule for a personal video recorder system using the scoring of the one or more plans.
2. (Original) The method of claim 1, further comprising:
receiving a priority for each job from a user.
3. (Cancelled)

4. (Currently Amended) The method of claim [[3]]1, further comprising:
automatically determining a preferred plan based on the assigned scores.
5. (Original) The method of claim 4, further comprising:
the step of assigning scores includes assigning scores based on a user assigned
priority for each job.
6. (Previously Presented) The method of claim 4, further comprising:
the step of assigning scores includes assigning scores based on components of
each of the plurality of jobs.
7. (Original) The method of claim 3, further comprising:
ranking the one or more plans based on the assigned scores.
8. (Original) The method of claim 1, wherein:
the step of determining one or more plans includes determining two or more
plans.
9. (Original) The method of claim 1, further comprising:
automatically determining a preferred plan based on scores, wherein the scores
are based on components of each of the jobs, the components including at least one element
selected from the group including a recording time, a recording quality, a type of program, a
relative position in an order a job of the two or more jobs was input, an inclusion of bonus time
and a keyword.

10. (Previously Presented) The method of claim 1, further comprising:
receiving a trigger;
in response to receiving the trigger, determining one or more new solutions for the plurality of jobs; and
determining a new plan including one new solution for each job such that the solutions use less than or equal to the number of resources available.
11. (Currently Amended) The method of claim 10, wherein:
the step of receiving the trigger includes receiving an updated transmission schedule from an input source.
12. (Previously Presented) The method of claim 10, wherein:
the step of receiving the trigger includes receiving an updated transmission schedule from an input source, the input source selected from a group including a satellite signal, a cable signal, an antenna signal, and a telephone line signal.
13. (Previously Presented) The method of claim 10, wherein:
the step of receiving the trigger includes receiving a user input.
14. (Previously Presented) The method of claim 1, further comprising:
providing a user with the two or more plans; and
receiving a first user input that indicates a preferred plan.
15. (Previously Presented) The method of claim 14, further comprising:
determining from the first user input a user priority for at least one job.

16. (Previously Presented) The method of claim 15, further comprising:
receiving a second user input adding a new job;
determining one or more new solutions for the new job; and
determining a new plan including one of the one or more new solutions, wherein
determining the plan is based in part on the first user input.

17. (Original) The method of claim 1, wherein:
the step of determining one or more plans includes determining the one or more
plans based on a pre-defined user preference.

18. (Original) The method of claim 17, further comprising:
filtering the one or more plans including keeping a first plan for presentation to a
user and ignoring a second plan so that the second plan is not presented to the user.

19. (Previously Presented) The method of claim 18, wherein:
the first plan has a first set of solutions for the plurality of jobs and the second
plan has a second set of solutions for the plurality of jobs, wherein at least one solution for at
least one job of the first set of solutions is preferred over a corresponding solution for the at least
one job of the second set of solutions.

20. (Original) The method of claim 17, further comprising:
scoring the one or more plans based on the pre-defined user preference; and
filtering the one or more plans such that at least one plan with a higher score than
other plans of the one or more plans is presented to a user and at least one plan with a lower
score than other plans of the one or more plans is not presented to the user.

21. (Original) The method of claim 1, further comprising:
presenting the one or more plans to the user.

22. (Original) The method of claim 21, wherein:
presenting the one or more plans to the user includes presenting the plans in a first category and a second category, the first category including zero or more plans having no null solutions and the second category including zero or more plans having at least one null solution.
23. (Previously Presented) The method of claim 1, wherein:
the step of receiving the one or more inputs requesting the plurality of jobs includes receiving an input request to record a program.
24. (Previously Presented) The method of claim 1, wherein:
the step of receiving the one or more inputs requesting the plurality of jobs includes receiving an input request to accomplish a task.
25. (New) A method comprising:
receiving one or more inputs, the one or more inputs requesting recording of one or more of a plurality of jobs;
determining one or more solutions for each of the plurality of jobs based on a transmission schedule, the solutions including null solutions and non-null solutions, each non-null solution requiring a set of resources over a set of intervals, wherein one or more combinations of solutions for the plurality of jobs require a number of resources greater than a number of resources available at a particular interval, resulting in a scheduling conflict;
resolving the scheduling conflict including automatically determining one or more plans for performing jobs, each plan having a combination of solutions including a particular solution for each of the plurality of jobs, wherein resources used by the plurality of jobs for the combination of solutions in each plan are less than or equal to the number of resources available at each interval, where determining each plan includes identifying a high scoring solution for a first job of the plurality of jobs and identifying solutions for each other job of the plurality of jobs compatible with the high scoring solution of the first job; and
using a specified plan of the one or more plans to determine a recording schedule for a personal video recorder system.
